**Vaccines are the simplest way to keep you & your family healthy & well.**

Doctors, scientists and pharmacists work together to make vaccines against the most harmful diseases so they can protect their families and your family.

## The Importance of Community Immunity

If we all get the vaccines we need, when we need them, we can help prevent germs from spreading in our community. This is called Community Immunity. It helps protect our family and friends as well as others in our community who cannot get vaccines, like those who are very sick and young infants.

**Boost your natural immune response with vaccines and help keep your family from getting sick.**

# Boost Your Natural Immune Response

## VACCINATE THE **WHOLE** FAMILY
