while working together

PUBLIC HEALTH UPDATE

Monkeypox

- General update
- Testing

COVID-19

- General update
- Omicron Booster
- Updated CDC masking/ quarantine guidance

POLL.

COVID-19 VACCINE

Are you offering to babies & kids?

BABY COVID VACCINES

Moderna - 6 months through 5 years
Pfizer - 6 months through 4 years

MODERNA

6 MONTHS THROUGH 5 YEARS OF AGE

- 2 doses 4-8 weeks apart
- Moderately or Severely Immunocompromised
 - 2 doses 4 weeks apart
- Vaccine Vial Cap
 - Dark Blue
- Label Border
 - Magenta
- No Dilution
- 0.25mL

MODERNA

CHILDREN WHO TURN FROM AGE 5 TO AGE 6

DOSE 1 AT AGE 5

Blue Cap/Magenta Border Vial for Children 6 months to 5 years

4 - 8 WEEKS APART

DOSE 2 AT AGE 6

Dose 2 at age 6
Dark Blue Cap/Purple Border Vial for Children 6 to 11 years

**FOR CHILDREN WHO
TRANSITION FROM A
YOUNGER TO OLDER AGE
GROUP**

www.cdc.gov/vaccines/covid-19/downloads/Moderna-Child-Age-Transition-508.pdf

PFIZER 6 MONTHS THROUGH 4 YEARS OF AGE

- 3 doses
 - 3 - 8 weeks between dose 1 & 2
 - 8 weeks between dose 2 & 3
- Moderately to Severely Immunocompromised
 - 3 weeks between dose 1 & 2
- Vaccine Vial Cap - **Maroon**
- Label Boarder - **Maroon**
- Dilution Required
 - 2.2mL 0.9% Sodium Chloride
- 0.2mL

PFIZER

CHILDREN WHO TURN FROM AGE 4 TO AGE 5

DOSE 1 AT AGE 4
Maroon Cap and Border –
Children 6 months - 4 years

3 - 8 Weeks

DOSE 2 AT AGE 5
Orange Cap and Boarder –
Children 5 years - 11 years

8 Weeks

DOSE 3 AT AGE 5
Orange Cap and Boarder –
Children 5 years - 11 years

**FOR CHILDREN WHO
TRANSITION FROM A
YOUNGER TO OLDER AGE
GROUP**

POLIO

First Polio Case in Nearly a Decade Is Detected in New York State

A man who lives in Rockland County was infected by someone who received the oral polio vaccine, which is no longer used in the United States, officials said.

A case of polio has been identified in an unvaccinated adult man in Rockland County, officials said.

Polio Has Been Detected in New York City Wastewater, Officials Say

The detection of the virus in sewage suggests it is circulating in the city, Health Department officials said.

Published Aug. 12, 2022 Updated Aug. 13, 2022

Polio outbreaks incited regular panics decades ago, until a vaccine was developed and the disease was largely eradicated. The Friday, New York City health authorities announced that they had found the virus in wastewater samples, suggesting polio is circulating in the city.

The New York Times

The Fight Against Polio

The highly contagious virus was one of the most feared diseases until the 1950s, when the first vaccine was developed.

- **New York Case:** Officials in a [New York suburb](#) reported a case of polio in an unvaccinated adult man in July — [the first U.S. case in nearly a decade](#).
- **A Multibillion-Dollar Effort:** A partnership of national governments and health organizations has a [plan to rid the world of polio by 2026](#), which is now endemic in just two countries.
- **Major Obstacles:** Two of the three strains of polio have been eliminated from the Earth. [But new barriers to full eradication keep cropping up](#).
- **Childhood Vaccinations Drop:** A sharp decline in childhood vaccinations around the world during the coronavirus pandemic — including those for polio — [could threaten the lives of millions of children](#).

MEASLES

Zimbabwe Measles Outbreak Blamed on Sect Gatherings Kills 157 Children

By [Reuters](#) | Aug. 16, 2022, at 1:04 p.m.

HARARE (Reuters) - A measles outbreak in Zimbabwe has killed 157 children with the death nearly doubling in just under a week, the information minister said on Tuesday.

WHY?

What you do EVERY DAY is important and saves lives.

WHAT IS TEAM-BASED CARE?

The provision of **comprehensive health services** to individuals, families, and/or their communities by at least two health professionals who **work collaboratively** along **with patients**, family caregivers, and community service providers on **shared goals** within and across settings to achieve care that is safe, effective, patient-centered, timely, efficient, and equitable.

and turnover!!!**

FIGURE 1. TEAM-BASED CARE ROLES

EVERYONE SHOULD DO THIS...

- Practice open communication internally
- Intentionally consider patient experience
- Training - onboarding and ongoing
- Let the data drive decisions
- Remember evidence-based interventions
- Family-centered, culturally appropriate care

**How does your clinic's
immunization process look
to your patients?**

TRAINING

NOT JUST YOU.

Onboarding, annually, when new vaccines are added to schedule, when schedule changes

DATA-DRIVEN DECISIONS

RUN REPORTS.
LOOK AT THEM.
DO SOMETHING ABOUT IT.

EVIDENCE-BASED INTERVENTIONS

- Reminder recall
- Data quality in ASIIS & EMR
- Standing orders
- Strong provider recommendation
- Screening at all visits (sick & well)

Family-centered, culturally appropriate care

10 THINGS PARENTS NEED TO KNOW

About Why We Immunize
