Social media algorithms will show you what it thinks you want to see, not what you NEED to see. It’s crazy how the social media algorithm works. Did you happen to click on an anti-vaccine article? Now your social media algorithms will bring you similar content. Soon it will seem like everyone you know and follow is anti-vaccine, when in reality, the majority agree that vaccination is the best way to prevent disease, death, and suffering.

We at Back to the Vax know this all too well, so we have created a list of social media experts to follow, so that you can fill your social media with accurate and helpful scientific information regarding vaccines. We have gotten to know many experts in our journey to gaining vaccine confidence and have been truly touched by how helpful the scientific community is. We also have a podcast called Back to the Vax, where we interview experts on common vaccine misconceptions.
